### **LEED® v4 Credits with DuroDesign Cork Flooring**

DuroDesign cork flooring contributes to certification under the U.S. Green Building Council's LEED® (Leadership in Energy and Environmental Design) rating system with BD+C, ID+C and O+M credits:

■ **Materials and Resources: Building product disclosure and optimization – sourcing of raw materials (up to 2 pts)**

All DuroDesign cork flooring is composed of compressed granulated cork resulting from the production of wine-stoppers. Cork flooring contains 93% pre-consumer recycled waste.

■ **Indoor environmental quality: Low-emitting products (up to 3 pts)**

The water-based contact adhesive we supply has only 37 g/L V.O.C. Our Mp765 Polyurethane finish has only 200 g/L V.O.C. Both are under the V.O.C. content limits of SCAQMD Rule 1168

■ **Indoor environmental quality: Acoustic performance (up to 2 pts)**

Cork's unique cellular structure and resiliency enables it to absorb sound, reduce sound transmission, reduce reverberation and improve the acoustic performance of a space.

Contact DuroDesign for more information on how we can help you achieve LEED certification for your next project.
